PROFESSIONAL SUMMARY

Senior Mobile Developer with 6+ years of specialized experience in React Native, building high-performance, scalable cross-platform apps for production environments. Track record of shipping to millions of users at companies like Globant and Perficient, with a focus on clean architecture, test coverage, and measurable performance improvements. Currently focused on React Native New Architecture adoption, performance profiling with Flipper, and building maintainable test coverage in production-scale apps.

SKILLS

Core	React Native · TypeScript · JavaScript · React · Expo · Expo Router · Deep Linking
State & Data	Redux Toolkit · Redux Saga · Redux Persist · React Query · Zustand · Context API · REST APIs · GraphQL · BFF (NestJS)
Analytics	Firebase · Crashlytics · Sentry
Testing	Jest · React Testing Library · Unit Testing
DevOps	Git · GitHub Actions · Azure DevOps · Fastlane · CI/CD · App Store · Google Play
Methodologies	Agile · Scrum · Kanban

WORK EXPERIENCE

Mobile Developer · Stefanini *Aug 2026 – Present*

Santiago, Chile · Remote

- Implemented the personal data processing consent flow in a production mobile app to comply with Chile's new Personal Data Protection Law (Law 21.719), covering consent capture, user-facing UI, and state handling across the app.
- Integrated consent-related REST endpoints using Redux Saga, managing asynchronous flows, side effects, and error/retry handling in a clean, testable way.
- Worked with a BFF layer that orchestrates calls to multiple backend services, collaborating with backend engineers to define the contracts the mobile app consumes.

Experienced Consultant · Amaris Consulting *Mar 2026 – Aug 2026*

Santiago, Chile · Remote

- Migrated 5 core modules (auth, home, purchase history, notifications, profile) to React Native 0.83 in a team of 3, raising unit test coverage to ~82% using Jest and React Testing Library.

- Delivered end-to-end profile editing feature (name, email with OTP verification, region/commune) covering REST API integration, Redux state management, UI implementation, and unit test coverage — shipped without post-release bugs across first 2 sprints.

Senior Frontend Developer · amiPass *Jul 2025 – Mar 2026*

Santiago, Chile · Remote

- Architected greenfield cross-platform app from scratch using Expo and React Native, defining folder structure, navigation architecture, and TypeScript conventions adopted by the full 3-person team.
- Established state management patterns and component design standards with TypeScript, leading GitHub-based code reviews that reduced review cycle friction for the 3-person team.
- Coordinated with Product, UX, and Backend teams across full feature lifecycle — from spec to delivery — maintaining sprint commitments across 3 production releases.

Mobile Analyst · Perficient *Sep 2023 – May 2025*

Santiago, Chile · Remote

- Improved app rendering performance by 10% measured via Flipper profiling, implementing lazy loading, optimized re-render cycles, and efficient data-fetching strategies across production React Native codebase.
- Implemented offline-first architecture using local data persistence, enabling full app functionality in low-connectivity environments and eliminating dependency on stable network for core user flows.
- Developed and maintained production cross-platform applications in React Native and TypeScript, publishing releases to App Store and Google Play following platform review guidelines.
- Implemented observability stack with Firebase Analytics (custom event instrumentation across onboarding and purchase flows), Crashlytics, and Sentry, reducing mean time to detect critical errors in production.

Web UI Developer · Globant *Dec 2021 – Sep 2023*

Santiago, Chile · Remote

- Boosted NFL mobile app rendering performance by 20% measured via Flipper, migrating from FlatList to FlashList and introducing React Query for optimized data caching and background refetching.
- Built scalable, accessible (a11y-compliant) UI component library aligned with design system guidelines, accelerating feature delivery across a distributed team of 6 developers in Chile and Colombia.
- Contributed to GitHub Actions-based CI/CD pipeline for automated builds and deployments to App Store and Google Play, reducing manual release overhead across the team.

React Native Developer · Boosmap *Feb 2021 – Oct 2021*

Santiago, Chile · Remote

- Built a full delivery management app from zero to production (App Store and Google Play) using React Native, TypeScript, and Redux, covering order lifecycle, real-time tracking with map integration, and push notifications via Firebase.
- Integrated Google Maps SDK for real-time driver location tracking, implementing custom marker rendering and route visualization for the delivery management interface.

React Native Developer · Universidad Católica del Norte *Dec 2019 – Jan 2021*

Coquimbo, Chile · Remote

- Developed internal React Native apps for the Centro de Inteligencia de Negocios (CIN), including a reusable component library that cut average feature development time from ~5 days to ~3 days.

EDUCATION

Bachelor of Science in Computer Engineering *2013 – 2019*
Universidad Católica del Norte · Coquimbo, Chile

Spanish Native
English B2 – Upper Intermediate
